SystemOn

Audio Asset Management Software

TOTAL COMMAND OF SHURE NETWORKED AUDIO HARDWARE

Shure SystemOn Audio Asset Management Software was developed for managing mission critical or large-scale deployments of Shure audio hardware across corporate and higher education networks from one central platform. SystemOn tracks audio levels, battery life and RF/spectrum status in real time, enabling IT administrators and AV technicians to monitor and control Shure hardware devices remotely using a laptop, smartphone or tablet.

Users of Microflex® Wireless, ULX-D® Digital Wireless and the SCM820 Automatic Mixer can use SystemOn to detect problems before they become critical and respond quickly and efficiently, eliminating the need for on-site troubleshooting.

Supported Shure Products

MICROFLEX® WIRELESS
Wireless Microphone Systems

ULX-D® DIGITAL WIRELESS
Digital Wireless Microphone Systems

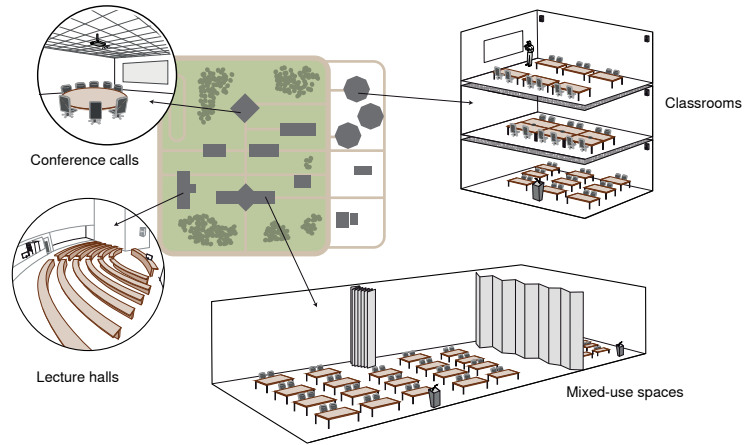

SCM820
Digital Intellimix® Automatic Mixer

Feature Overview

CENTRALIZED MONITORING AND CONTROL

- SystemOn automatically discovers Shure devices on the same subnet via IP address
- Devices on other subnets can be manually added
- Enables AV Staff the ability to work more efficiently
- Provides summarized status of wireless system and device attributes, and captures event history
- Remotely control and manage audio gain, muting, and device identification

Alerts and Remote Response

Receive instant notification via email and sms text messaging* about potential issues such as missing devices to AV/IT administrator allowing you the ability to fix potential problems before they happen. Other features include Remote Muting, device identification, and single-view audio gain adjustment.

*Powered by Twilio, account required

Inventory Management

SystemOn provides AV administrators the flexibility to manage mission critical or large deployments of Shure audio equipment. Networked devices can be organized by room, building or campus – even across different subnets. SystemOn allows you to pre-link microphones to network destination, and get real-time room status for help desk.

Simple Configuration

Streamline login by selecting users from existing enterprise directories and customize user access and permissions based on user role or location. The direct link between Shure hardware and software requires zero additional programming, and provides seamless availability of new features and updates. Software language options may be customized and applied to individual account settings.

Battery Management and Device Status

A SystemOn administrator has the ability to view important battery metrics such as battery level, remaining charge time and health status. Accurate battery management ensures that devices are always available for use. SystemOn also provides AV/IT technicians with knowledge of device status, such as instances when a bodypack accidentally leaves the room.

Software Licensing

SystemOn is available through a subscription model with one to five year plans.

- The standard subscription includes any software updates and additions made during that time period, and can be extended with renewal licenses thereafter.
- An Enterprise license covers an unlimited number of IP addressable devices for one year. This license can be renewed on an annual basis.
- SystemOn Audio Asset Management Software should be installed on a server. The software subscription is registered to the server on which it is installed. Please see System Requirements for details at www.shure.com/SystemOn
