

# DCS 6000 Digital SW 6060 Conference Management Software

## SW 6060 - Parliamentary Voting Module

The SW 6060 module adds voting control facility to the SW 6000 software applications. The module gives full control of voting sessions as any CUA can be set to control a voting session. With this module installed the CAA application is used to create a number of voting setups. An unlimited number of setups can be created out of the following options:

- Number of buttons to be used (1 to 5)
- Parameter: Secret
- Parameter: Display Interim result

- Parameter: Use Delegate weight
- Parameter: Use Quorum formula
- Parameter: Attendance check
- Parameter: Show elapsed time/remaining time
- Parameter: Quorum formula (user specified)
- Parameter: "Passed" formula (user specified)
- Up to nine user specified formulas for results calculation and viewing

When a voting session is started at a CUA application, the desired voting setup can be selected and the voting can be started.

The delegates can cast their vote using a DCS 6000 Voting unit or on a PC running the CUA application. The result of the voting session can be viewed on a CUA application or shown on a large screen projector with the CDA application. The result is also stored in the database and can be printed out at any time.

### How to order

**Application:**  
SW 6060 Parliamentary Voting Module

**Order No:**  
15 19 06060
